Introduction

The ground beetles (Carabidae) is comparatively well studied beetle's family in Lithuania. In most cases they were studied as bioindicators to determine the influence of some ecological factors to both agricultural (Tamutis, 2000; Tamutis *et al.*, 2004, 2007) and forest (Žiogas & Vaičiakauskas, 2007a, 2007b; Dapkus & Tamutis, 2008; Lynikienė, 2006) ecosystems. Some studies were devoted to the investigation of species composition and distribution in some important areas (Sharova & Grūntal, 1973, Dvilevičius *et al.*, 1988) or deal with exclusively faunistics and ecology (Ogijewicz, 1933; Pileckis & Monsevičius, 1995; Tamutis & Barševskis, 2014). Lots of single faunistic records are scattered in numerous publications and communications (Tamutis *et al.*, 2011). Despite the attention of entomologists to this beetles' family in Lithuania the knowledge on distribution of some species is still insufficient.

In current paper we present the new information on some rare or insufficiently known species of Nebriinae, Carabinae, Omophroninae, Elaphrininae, Scaritinae, Broscinae subfamilies.

Material and methods

The data is based on the material collected by the authors Vytautas Tamutis (V.T.), Brigita Tamutė (B.T.), Romas Ferenca (R.F.) and other collectors: Kęstutis Arbačiauskas (K.A.), Teisutis Ašmenavičius (T.A.); Dalius Dapkus (D.D.), Elena Gaidienė (E.G.), Artūras Gedminas (A.G.), Povilas Ivinskis (P.I.), Saulius Karalius (S.K.), A. Kaulinis (A.K.), L. Kontenytė (L.K.), Aleksandras Meržijevskis (A.M.), Vidmantas Monsevičius (Vidm.M.), Virginijus Monsevičius (Virg.M.), Povilas Mulerčikas (P.M.), Norbertas Noreika (N.N.); Henrikas Ostrauskas (H.O.), Rimantas Pankevičius (R.P.), Simona Pileckis (S.P.), Algimantas Ragelis (A.R.), Gintautas Steiblys (G.S.), Gintaras Slavinskas (G.Sl.), K. Tešerskis (K.T.), Vytautas Uselis (V.U.). All available published and unpublished data of findings was used to present the pattern of seasonal distribution of collected specimens in Lithuania. The main mass of material was collected using pitfall traps, other specimens mostly of such species as: *Notiophilus germinyi*, *Omophron limbatum*, *Blethisa multipunctatum*, *Elaphrus aureus*, *Clivina collaris* and *Miscodera arctica*, were collected surveyng specific habitats. For identification of species we used the keys suggested by K. Hürka (1996) and G. Müller-Motzfeld (2004). The

nomenclature follows Carabidae of the World database (Anichtchenko, 2007–2015) and Catalogue of Palaearctic Coleoptera (Löbl & Smetana, 2003). The material is deposited in the collection of Kaunas Tadas Ivanauskas Zoological museum.

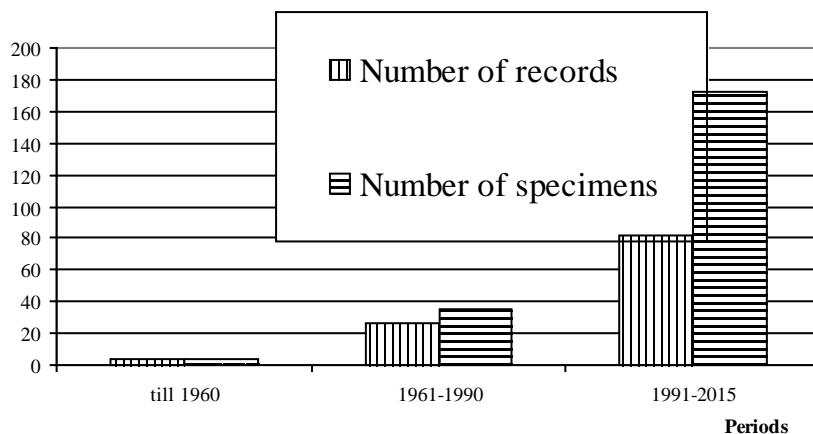

Fig. 1. Number of records and recorded specimens of *Nebria brevicollis* F. in Lithuania

Notes. This species is widely distributed in Europe, also noted for Siberia and Far East, Turkey, Algeria (Farkač & Janata, 2003), introduced to North America and is rapidly expanding its range in the western part of the country (LaBonte, 2011). The expansion of the distribution range of this species to the European north east and its population growth in the last decades have been detected in Europe as well, but still not widely discussed (O. Aleksandrowich personal comment). The assigning of this species as rare in Lithuania by Pileckis & Monsevičius (1995) is probably based on previous old single records (Ogijewicz, 1933; Pileckis, 1960, 1963). Assuming all available data on distribution of this species some tendencies of its population growth could be perceptible in Lithuania too (Fig. 1). Presently this species is frequent and widely distributed in

Lithuania; inhabits various habitats suchs as forests (preferably deciduous and mixed), water banks, meadows, arable lands, shruby areas and likewise. Observations of adults in Lithuania: III: 2; IV: 4; V: 17; VI: 44; VII: 41; VIII: 80; IX: 15; X: 7.

***Leistus rufomarginatus* Duftschmid, 1812**

Jiesia landscape rezevre, 28 08 2006, 01 07 2009, 29 04 2011 (1, 1, 1) spec. (R.F.); Kamšos Miškas f., 27 02 2000, 1 spec. (V.T.), 01–15 07 2005, 11 spec. (P.M.), Ringovė Entomological reserve, 18 07 1996, 1 spec. (A.M.); 05 07 1998, 1 spec. (V.T.), 27 08 2003, 23 08 2005 (1, 2) spec. (R.F.); Romainiai park, 24 07 2007, 1 spec. (A.M.); Smalininkai env., 27 07 1995, 1 spec. (V.T.); Šeiminyškiai env., 15 08 2000, 1 spec. (Anonymous); Tervydoniai env., 29 08 2015, 1 spec. (R.F.); Vytautas park, 07 08 2007, 1 spec. (A.M.).

Notes. This species is natively distributed in central Europe and Caucasus, northern border of range reaches southern part of Sweden, Denmark, northern part of Poland and eastern Prussia (nower days – Kaliningad region) (Lindroth, 1992, Bercio & Folwaczny, 1979). However new records of this species in Lithuania and Latvia (Barševskis, 2001, Ferenca *et al.*, 2002; Ivinskis *et al.*, 2006) extends its distribution range to the northeast. Since the first record of this species in the western part of Lithuania in 1992 it spread to the east as far as 25° of eastern longitude. Almost all newly recorded specimens of *L. rufomarginatus* in Lithuania were found in the stands of deciduous trees. Observations of adults in Lithuania: II: 1; IV: 1; VI: 2; VII: 14; VIII: 8; X: 3.

***Leistus piceus* Frölich, 1799**

Bubių Miškas f., 10 07 1999, 1 spec. (G.Sl.); Ramoniškė env., 23 06 1993, 1 spec. (Vidm.M.).

Notes. It is poor known and seems to be extremely rare species in Lithuania; previously recorded from central part of the country (Šablevičius & Ferenca, 1995). The previous records of this species from Vilkija env. (Kaunas distr.), Juodkrantė and Preila environs (Neringa mun.) (Šablevičius, 2003; Ferenca 2014), Stalgėnai env. (Plungė distr.) (Šablevičius, 2003) were based on misidentifications and related to *Leistus ferrugineus* Linnaeus, 1758. *Leistus piceus* is distributed in central Europe (Farkač & Janata, 2003), and is considered as typical montane species (Burakowski *et al.*, 1973; Fritze & Blick, 2012); it is rare in lowlands, occasionally found in northwestern France, Belgium, northeastern Poland, Belarus, Latvia, Estonia, western Russia (Amiet, 1962; Desender, 1986; Burakowski *et al.*, 1973; Aleksandriwicz, 2014; Barševskis, 2003; Haberman, 1968; Alekseev, 2008; Kataev, 2004; Egorov, 2010).

Tribe Notiophilini Motschulsky, 1850

***Notiophilus germinyi* Fauvel, 1863**

Antalgė, 03 04 1977, 1 spec. (A.K.); Baluoša peat bog, 02–15 06 1999, 1 spec. (D.D.); Čepkeliai Nat. R.¹, 15–29 07 1976, 19 08 1976, 02 09 1976, 6 06 1977, 01–20 06 1981, 11–17 08 1981, 04 08 1984, (2, 1, 1, 1, 2, 2, 1) spec. (Vidm.M.); 15 07 1985, 1 spec. (R.F.); Druskininkai env., 22 07 1995, 1 spec. (V.T.); Dubravos Miškas f.¹, 04 10 1984, 1 spec. (R.F.); Ežerėlis env., 06 08 1982, 1 spec. (R.F.); Juodkrantė env., 24 08 1967, 1 spec. (E.G.); 08 10 2005, 1 spec. (P.I.); Merkinė, 26 06 2002, 1 spec. (A.M.); Viešvilė Nat. R.¹, 15 07 2001, 1 spec. (V.U.); Viešvilė Nat. R.², 12 06 2008, 1 spec. (V.T. & B.T.); Viešvilė Nat. R.³, 09 05 2008, 12 06 2008, 29 07 2008, (4, 1, 1) spec. (V.T. & B.T.); Zervynos, 15 07 1976, 16 06 1977, (1, 1) spec. (Vidm.M.).

Notes. This typical xerophilous species occurs in sandy or gravely, weakly shaded or

open habitats: lichen rich pine heaths, dry meadows with low vegetation. Despite wide distribution range of this species (Farkač & Janata, 2003) in Lithuania it was found fairly locally and was known only from several districts (Ogijewicz, 1933; Barševskis, 2001, Ferenca, 2014). Observations of adults in Lithuania: IV: 1; V: 6; VI: 8; VII: 8; VIII: 13; IX: 7; X: 1.

Subfamily Carabinae Latreile, 1802

Tribe Carabini Latreile, 1802

Carabus clatratus Linnaeus, 1761

Aukštostios Miškas f. (Baltkojai forestry), 10 06 1960, 1 spec. (S.P.); Ažuolų Būdos Miškas f., August 1958, 1 spec. (S.P.); Baluoša peat bog, 13 05 1999, 1 spec. (D.D.); Čepkeliai Nat. R.², 25 05 1976, 19 06 1976, 19 06 1978, 25 06 1983, (1, 1, 1, 1) spec. (Virg.M.); Dubravos Miškas f.³, 15 07 1955, 1 spec. (S.P.); Glitiškės env., August 1960, 1 spec. (S.P.); Juknaičiai env., 10 06 1997, 12 05 1998, (1, 1) spec. (A.G.); Kazlų Rūda env., 17 07 1956, 1 spec. (E.G.); Nemunėlio Radviliškis env., June–August 1958, 2 spec. (S.P.); Padumblys env., 15 07 1955, 1 spec. (S.P.); Plokštinės Miškas f., 06 08 1997, 1 spec. (H.O.); Varėna env., June 1959, 1 spec. (S.P.); 02 06 1976, 1 spec. (Anonymous).

Notes. This species was considered as not rare in Lithuania and noted for central, eastern and southern parts of Lithuania without concrete data (Pileckis & Monsevičius, 1995). Full finding data previously was published only from few localities: Žuvintas Nat. R. (Zajančkauskas & Pileckis, 1968; Sharova & Grüntal 1973), Tyruliai bog (Ferenca, 2006), Trakai and Vilnius environs (Ogijewicz, 1933), Juodkrantė env. (Ferenca, 2003, 2014; Ivinskis *et al.*, 2004). Population of this species in Lithuania seems to decline; just six specimens have been detected during the last 35 years. This species is also regarded as rare and local in all Fenoscandian countries (Lindroth, 1992), in some countries of Europe it is included into the lists of officially protected species (Cinītis, 1998; Pawłowski *et al.*, 2002; Belova, 2004; Curikov, 2006; Ødegaard *et al.*, 2010; Rizun, 2011). Observations of adults in Lithuania: IV: 1; V: 5; VI: 12; VII: 4; VIII: 5; IX: 1.

Carabus convexus Fabricius, 1775

Čižiškė env., 06 06 2005, 02 07 2005, (1, 1) spec. (P.I.); Dubravos Miškas f.¹, 03 08 1984, 10 08 1984, 23 08 1984, (1, 1, 1) spec. (R.F.); 27 04 1987, 1 spec. (A.R.); Karmazinai env., 29 07 2003, 1 spec. (R.F.); Kruonis env., 19 05 1991, 1 spec. (A.M.), Nagliai Nat. R., 30 05 2009, 1 spec. (R.F.); Palanga aeroport env., 09–30 05 2001, 3 spec. (R.F.); Randamonyš env., 09 10 2001, 1 spec. (A.G.); Smiltynė env.¹, 14 07 1982, 12 07 1983, 03 08 1983, 09 07 1984, 05 08 1984, (1, 1, 1, 1, 2) spec. (S.K.); Smiltynė env.², 04–23 06 1995, 06–07 07 1995, (8, 4) spec. (V.T.); Šilėnai env., 29 07 2003, 1 spec. (R.F.); Šimonų Giria f., 08–11 06 1997, 1 spec. (R.P.); Tartokių Miškas f., 01–20 06 2005, 22 08 2005, (2, 3) spec. (P.I.); Vaišniūnai env., 14 06 1994, 1 spec. (R.P.); Verkiai env., 06 06 2005, 3 spec. (P.I.) Žiegždrių Miškas f., 20 08 1982, 1 spec. (R.F.).

Notes. This species is widely distributed in Central Europe and Caucasus, but rare in the northern areas (Lindroth, 1992; Cinītis, 1998; Pawłowski *et al.*, 2002; Hyvärinen *et al.*, 2010; Ljunberg *et al.*, 2010; Ødegaard *et al.*, 2010). In Lithuania this species is local and almost everywhere sporadic. It occurs either in dry or semidry deciduous and coniferous forests. Most numerous specimens were observed in Pine forests of Curonian Spit (Ferenca 2014). Observations of adults in Lithuania: IV: 16; V: 18; VI: 37; VII: 27;

VIII: 19; X: 2; XI: 6.

***Carabus nitens* Linnaeus, 1758**

Aukštumala bog, June 2003, 1 spec. (V.U.); Dituva env., 3 07 1985, 1 spec. (S.K.); Druskininkai env., 15 06 1996, 1 spec. (V.T.); Dubravos Miškas f.⁴, 6 06 1999, 1 spec. (R.F.); Ežerėlis peat bog, 19 05 1985, 1 spec. (R.F.); Glitis bog, 5 06 1996, 1 spec. (V.U.); Kajackaraistis env.¹, 27 07 1986, 1 spec. (R.F.); Kamanos bog, 16 05 1984, 1 spec. (K.A.); Novaraistis peat bog, 20 08 2001, 1 spec. (A.G.); Paryžinės Miškas f., 31 05 2009, 1 spec. (G.S.); Plikiai env., 1 05 1987, 1 spec. (S.K.).

Notes. This European species is widely distributed in the country, but everywhere is sporadic; listed in the Red Data book of Lithuania as rare species (Ferenca, 2007). Almost all specimens of this species have been detected in dry, open or slightly shaded places with sand or peat soils: heaths, moors, clear cuts, openings; no catches in agricultural lands. The populations of this remarkable species have declined severely in recent decades in many countries of Central Europe (Assman & Janssen, 1999), and are officially protected in many European countries. Observations of adults in Lithuania: IV: 4; V: 50; VI: 53; VII: 20; VIII: 3; X: 2; XI: 6.

***Carabus violaceus andrzejuscii* Fischer von Waldheim, 1823**

Braziūkai env.², 27 07 2015, 1 spec. (V.T. & B.T.); Braziūkai env.³, 21 08 2011, 2 spec. (V.T. & B.T.); Čepkeliai Nat. R.¹, 09 06 1977, 08 06 1978, 30 10 1978 (1, 1, 4) spec. (Vidm.M.); Juškinės Miškas f., 20 05 2000, 25 08 2011 (2, 1) spec.. (R.F.); Krivasalis env., 20 07 1974, 2 spec. (Vidm.M.); Meištinės Miškas f., 21 06 2006, 1 spec. (A.M.); Nagliai Nat. (K.T. & L.K.); Paminėlė env., 11 08 1991, 1 spec. (Vidm.M.); Pogarenda env., 10 07 1977 1 spec. (Vidm.M.); Ramuldava env., 12 08 1988, 1 spec. (S.K.); Ratnyčios Miškas f., 10–21 05 1995, 1–27 06 1995 (4, 43) spec. (V. T.); Smiltynė env.¹, 29 07 1983, 12–14 08 1983 (1, 4) spec. (S.K.); Vaišniūnai env., 14 07 1975, 2 spec. (Vidm. M.); Varliškės env., 03–24 07 1991, 03–27 07 1993, 21 06 1993, 14 07 1993 (4, 5, 4, 5) spec. (H.O.); Varnikai env., 29 06 1994, 1 spec. (H.O.); Vidzgiris Botanical reserve, 30 07 1988, 17 08 2001 (1, 1) spec. (R.F.).

Notes. This subspecies is noted just for ten countries in Central Europe: Belarus, Central European Russia, Estonia, Latvija, Lithuania, Moldova, Poland, Romania, Slovakia and Ukraina (Bousquet *et al.*, 2003). It is typical forest species considered as rare in Lithuania (Pileckis & Monsevičius 1995), included into the Red lists of some European countries (Kataev & Krivohatskij, 2004; Trautner *et al.*, 2005, Aleksandrowicz, 2014). In Lithuania this species is distributed widely but not evenly, most frequently observed in Curonian Spit (Žiogas & Zolubas, 2005; Ferenca 2014) and Southern part, but remains sporadic in other areas; occurs mainly in pure pine stands or with a small admixture of *Picea* or *Betula* species. Observations of adults in Lithuania: II: 1; V: 14; VI: 79; VII: 71; VIII: 21; X: 5.

Subfamily **Omophroninae Bonelli, 1810**

Tribe **Omophronini Bonelli, 1810**

***Omophron limbatum* (Fabricius, 1777)**

(R.F.); Puvočiai env., 30 06 1993, 1 spec. (Anonymous); Reiskiai env., 16 07 1994, 1 spec. (S.K.); Siponyš env., bank of Nemunas r, June 1980, 1 spec. (G.Sl.); Škėvonys env., banko f Nemunas r., 28 05 2005, 1 spec. (V.U.); Tabariškiai env., banko f sand trench, 01–05 06 1992, 6 spec. (V.T.); Traklaukas env., bank of Šešuviris r., 11 07 2008, 1 spec. (V.T.); Varniai env. July 1966, 1 spec.(S.P.); Viršužiglis env., bank of Kauno marios pond, 14 07 1994, 14 06 2006, (1, 1) spec. (V.T.); Želsva env., 04 08 1999, 2 spec. (Vidm.M.).

Notes. West Palaearctic species widely distributed Central and Southern Europe (Hürka, 2003), but rare in northern border of its distribution range (Lindroth, 1992; Pawłowski *et al.*, 2002). It was considered as rare species in Lithuania as well (Pileckis & Monsevičius, 1995) and was mentioned just for several localities before (Sharova & Grūntal, 1973; Ferenca, 2004, 2006; Ivinskis *et al.*, 2009; Ferenca 2014). Assuming new findings we conclude that this species is quite frequent and widely distributed in Lithuania; inhabits sandy banks of various water bodies, sometimes even in relatively small or newly made ones, like sand quarries, pits, trenches and etc. Observations of adults in Lithuania: IV: 2; V: 20; VI: 22; VII: 25; VIII: 10.

Subfamily Elaphrinae Erichson, 1837

Tribe Elaphrini Erichson, 1837

***Blethisa multipunctata* (Linnaeus, 1758)**

Aukštumala bog, 03–31 05 2003, 1 spec. (V.U.); Juknaičiai env., 10 06 1997, 1 spec. (A.G.); Lapių Miškas f., 28 05 2009, 1 spec. (R.F.); Margininkai, 05 06 1994, 1 spec. (V.T.); Smiltynė env.¹, 12 07 1985, 1 spec. (S.K.); Trakai env., 23 04 1966, 1 spec. (E. G.).

Notes. This species is widely distributed in temperate and boreal zones of Eurasia and North America (Goulet *et al.*, 2009). The data on distribution of this species in Lithuania is poor. Previous records were known only from Curonian Spit (Šablevičius, 2003; Ivinskis *et al.*, 2004; Ferenca, 2014), Žuvintas Nature reserve and Tyruliai bog (Ferenca, 2006). As rare species it is listed in the Red lists of some European countries (Pawłowski *et al.*, 2002). This stenotopic hygrophilous species occurs on the banks of stagnant or slow-flowing fresh or brackish waters (Lindroth, 1992). Lithuanian catches: IV: 1; V: 7; VI: 6; VII: 2; VIII: 3; X: 5.

***Elaphrus aureus* P.W.J. Müller, 1821**

R.⁴, bank of Viešvilė r., 31 07 2008, 5 spec. (V.T. & B.T.); Varlaukis env., bank of Šešuvis r., 07 05 2012, 6 spec. (V.T. & B.T.).

Notes. This European species is widely distributed in Central Europe (Goulet, 2003), rare in northern border of its distribution range (Barševskis, 2003; Günther & Hölscher, 2004; Aleksandrowicz, 2014). In Lithuania this species was considered as very rare (Pileckis & Monsevičius 1995). Just few records from Zarasai environs (Pileckis, 1968), Lomena Lanscape reserve (Gedminas *et al.*, 1996) and Kartenalė Entomological reserve (Ferenca *et al.*, 2002) have been published previously. Newly found specimens were discovered in open (generally sun exposed) or slightly shaded with sparse vegetation river banks on sandy or sandy-loamy soil. Observations of adults in Lithuania: IV: 6; V: 11; VI: 4; VII: 10; VIII: 4.

Subfamily Scaritinae Bonelli, 1810

Tribe Clivinini Rafinesque, 1815

Clivina collaris (Herbst, 1784)

Jiesia landscape reserve, bank of Jiesia r., 08 08 1981; 27 05 1999, (1, 1) spec. (R.F.); Miknaičiai env., bank of Šešupė r., 09 05 2012, 7 spec. (V.T. & B.T.); Sėlų Miškas f., bank of Visinčia r., 19 06 1985, 1 spec. (R.F.); Varlaukis env., bank of Šešuvis r., 07 05 2012, 1 spec. (V.T. & B.T.).

Notes. It is poorly known species in Lithuania. To this day only few records have been documented in the country (Ogijewicz, 1933, Sharova & Grüntal, 1973; Ferenca, 2006). Newly found specimens were discovered in loamy and slimy, without vegetation river banks, close to water line. Observations of adults in Lithuania: IV: 1; V: 12; VI: 5; VIII: 2.

Subfamily Broscinae Hope. 1838

Tribe Broscini Hope. 1838

Miscodera arctica Eschscholtz, 1830

Čižiškė env., 20 06 2005, 11 07 2005, 02 08 2005, (2, 4, 2) spec. (P.I.); Druskininkai env., 24 05 1996, 08 08 1996, (1, 1) spec. (V.T.); Girionys env., 30 07 1983, 1 spec. (R.F.); Kajackaraistis env.², 24 08 1984, 1 spec. (R.F.); Kuodiškiai env., 29 09 1982, 1 spec. (G.Sl.); Viešvilė Nat. R.³, 09 05 2008, 2 spec. (V.T. & B.T.); Randamonyš env., 07 09 2001, 1 spec. (A.G.); Ratnyčia env., 24 05 1996, 1 spec. (V.T.); Skriaudžių Miškas f., 02 07 1991, 1 spec. (A.M.); Užuožerės Miškas f., 28 06 1984, 1 spec. (R.F.).

Notes. This species is distributed in boreal zone in Eurasia and North America (Bousquet, 2003), also is known from mountain region of Central Europe (Húrka, 1996). In the plains of Central Europe *M. arctica* is distributed very locally and sporadically, and is considered as a rare species (Pawłowski *et al.*, 2002; Pileckis & Monsevičius, 1995; Gürlich *et al.*, 2011; Aleksandrowicz, 2014). In Lithuania just few records from Dubravos Miškas f. (Pileckis, 1968), Varėna district (Pileckis & Monsevičius, 1995) and Baluoša peat bog (Ferenca *et al.*, 2002) have been published previously. Newly found specimens were discovered in dry forests with sandy soils, generally in clearings or

forest edges. Observations of adults in Lithuania: V: 4; VI: 6; VII: 10; VIII: 4; IX: 4; XI: 1.

Nauji duomenys apie retas ir mažai žinomas žygių rūšis (Coleoptera: Carabidae: Nebriinae, Carabinae, Omophroninae, Elaphrininae, Scaritinae, Broscinae) Lietuvoje

V. TAMUTIS, B. TAMUTĖ, R. FERENCA

Santrauka

Straipsnyje pateikiami nauji faunistiniai duomenys apie 13 žygių rūšių: *Nebria brevicollis* (F.), *Leistus rufomarginatus* Duft., *Leistus piceus* Fröl., *Notiophilus germanyi* Fauv., *Carabus clatratus* L., *Carabus convexus* F., *Carabus ritens* L., *Carabus violaceus andrzejuscii* Fisch., *Omophron limbatus* (F.), *Blethisa multipunctata* (L.), *Elaphrus aureus* Müll., *Clivina collaris* (Hbst.), *Miscodera arctica* Esch. Lietuvoje. Apžvelgiami šių rūsių paplitimas ir ekologijos ypatumai.
